

New iQuake® IQ-52 Speaker Systems are Feature Packed and Deliver Superior Sound Quality

Earthquake Sound has designed and engineered new speakers that allow users to dock and play MP3 or iPod® music through a high-end 2.1 compatible speaker system.

The IQ-52 cabinets are finished with several layers of high gloss piano lacquer then loaded with magnetically shielded 5-1/4" carbon fiber cone woofers and high definition 20mm silk dome tweeters. These high power drivers are fed via a 200-watt built-in Earthquake amplifier that's packed with all the bells and whistles.

Additionally, iQuake® systems can be used for stereo surround sound and accept input from up to three devices: iPod®, low-level input, and mini-jack input. Each device can easily be toggled through via the remote control or the amp panel.

With superior quality finish, speakers and advanced technology, IQ-52 systems are ready to breathe life into any playlist.

Specifications | IQ-52W and IQ-52B

- Frequency Response: 45Hz - 20kHz
- Amplifier Power: 200 Watts / Type: Class "A/B"
