

MINI D DIGITAL AMPS

PRODUCT RELEASE

It may be mini, but it sure is Mighty

The Earthquake **Mini D Mono** amplifiers are the most efficient class “D” series ever built. Available in 3 models, these amplifiers deliver unbelievable power despite of their super-compact size. With less than 2-inch tall and 7-inch deep, the **Mini D Mono** amplifiers can be installed in tight spaces of the vehicle (under the seat, behind the back seat, etc.), allowing you to keep that valuable storage space in your trunk and hubcap.

One unique feature of the **Mini D Mono** amplifiers is the **BRIDGE IN/OUT** that allows you to link 2 amplifiers together. Designed with patented Optical Control Circuitry, each of these amplifiers has a built in protection fuse designed to handle 1 to 4-Ohm loads. In addition, the amplifier will automatically reset once the protection circuit is triggered.

With the **Mini D Mono** amplifiers, you won't have to sacrifice efficiency and space to get the immense power you need for your install. Better yet, due to its remarkable efficiency, you won't even need extra batteries for them.

Features

- Bridgeable Design
- 0 - 12dB (30 - 80Hz) Bass Boost*
- Variable Subsonic Filter
- 40 - 80Hz LPF (Low Pass Filter)
- Gain Control
- Remote Sub Level

* available in the D2000 and D2500 models only
