FOCUS ON THE FINER DETAILS

Focus™ speakers are serious products, engineered by Earthquake Sound to meet the demands of the toughest musical and environmental situations in the high-fidelity world. These speakers provide the best sound quality possible while keeping mounting issues in mind. They are comparable in sound quality and construction quality to speakers that cost over double. There are no obstacles for installing these speakers and no shortcuts in their construction materials.

PERFECT FOR EVERY APPLICATION

By applying our extensive testing and development resources, Focus™ speakers have been optimized to reproduce your music with lifelike balance, effortless dynamics and smooth response in the car. Special attention has been placed on high frequency response and piston area which might makes all the difference when installed in a vehicle.

These speakers go above and beyond the standards set by other speakers, especially at this price point. They are designed to fit in almost every application and in almost every kind of vehicle.

FEATURES

- 4-ohm impedance
- Low mass poly injection cone bodies for top notch accuracy and sound quality
- High flow ventilation stamped steel basket design
- Over hung butyl rubber surround which increases pistons size thus increasing musical output and accuracy
- NOMEX / ROMEX spider assemblies for a strong, durable and more linear suspension
- Shallow mount designs for American and foreign cars and trucks
- Variable mount FS6.5; 6-1/2" component speaker for installation in almost any vehicle
- Swiveling 20mm silk dome tweeters with neodymium magnets
- Mellow color scheme for easier color matching

	MSRP
F3.5	\$75/pr
F4.0	\$99/pr
F5.25	\$120/pr
F4x6	\$120/pr
F5x7	\$120/pr
FS6.5	\$140/pr
F6x9	\$160/pr
EQ693	\$190/pr
