

Wireless Transceiver **SWAT-2.4X**

The SWAT-2.4X is a wireless audio transceiver that allows you to wirelessly play audio from the audio source to almost any powered speaker or amplifier.

The SWAT-2.4X is the perfect solution for your home theater set up. With the SWAT-2.4X, you don't have to worry about wiring a subwoofer that sits on the side of the room. For a high end theater system, use one, two or even three supernova subwoofers since one transmitter can pair to multiple receivers. Should you need to rearrange the subwoofers, there is no re-wiring required when using the SWAT-2.4X in your system.

The SWAT-2.4X is also ideal for parties and entertaining. For a seamless outdoor audio system, use the SWAT-2.4X and avoid the headache of outdoor wiring. You can play music from your source inside the house and the sound will emit from the speakers outside. The SWAT-2.4X is also great for DJs who want more freedom when setting up their speakers.

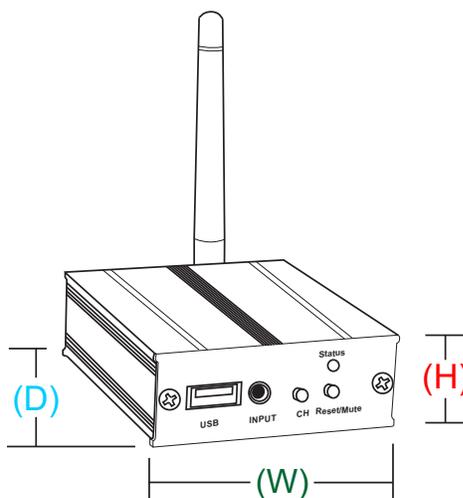

SWAT 2.4X Features:

- Multi-channel: 30 channels
- Point-to-point & point-to-mass pairing
- Stereo audio input or output(3.5mm)
- High level input 0.5V to 17VRMS
- Auto pairing and channel scanning
