

The Sound That Will Move You

Focus Coaxials

Focus™ speakers are engineered by Earthquake Sound to meet the demands of the toughest musical and environmental situations in the high fidelity world. Focus™ speakers pump high performance sound through neodymium tweeters and poly injected dual layer cones. These speakers provide the best sound quality possible while keeping mounting issues in mind. They are comparable in sound and construction quality to speakers that cost over double in price. There are no obstacles for installing these speakers and no shortcuts in their construction materials.

Features:

- 4-Ohm impedance
- Low mass poly injection cone bodies for top notch accuracy and sound quality
- High flow ventilation stamped steel basket design
- Over hung butyl rubber surround which increases pistons size thus increasing musical output and accuracy
- NOMEX/ROMEX spider assemblies for a strong, durable and more linear suspension
- Shallow mount designs for American and foreign cars and trucks
- Variable mount FS6.5; 6-1/2" component speaker for installation in almost any vehicle
- Swiveling 1 inch (25mm) dome tweeters with NEO magnets
- Mellow color scheme for easier color matching
- Gille included

By applying our extensive testing and development resources, Focus™ speakers have been optimized to reproduce your music with lifelike balance, effortless dynamics and smooth response in the car. Special attention has been placed on high frequency response and piston area which might make all the difference when installed in a vehicle.

These speakers go above and beyond the standards set by other speakers, especially at this price point. They are designed to fit in almost every application and in almost every kind of vehicle.
