

# Supernova MKVII Subwoofer

## Product Release

Earthquake Sound is proud to bring you the new Supernova MKVII (Mark Seven) Series subwoofers. When it comes to delivering uncompromised LFE performance with magnificent dynamics and accurate articulation, the MKVII Series is designed and engineered to go beyond the norm of perfection.

Just as its predecessor Supernova MKVI, the MKVII Series also utilizes the revolutionary IQ600 Class J amplifier with phase and time control to ensure optimum acoustic integrations in any room. The supremely efficient IQ600 effortlessly produces 1200 Watts of dynamic power and 600 Watts of continuous power.

All of that sheer electrical energy is converted into physical movement by the legendary MAGMA-X driver. Engineered with 3mm stiff non-pressed fiber cone, thick single layer poly-ether draw surrounds and the patented TCT™ (Turbo Cooled Technology), the MAGMA-X delivers faster response and max excursion without overheating.

The above MKVII components are enclosed in deep luxurious black piano lacquer cabinet specifically curved to reduce internal resonance and diffractions, allowing the MKVII to deliver a crisper bass and more accurate response. Available in 12-inch and 15-inch sealed (front firing) and ported (passive radiator) enclosure designs; the MKVII is the new state-of-the-art subwoofer available today.

### FEATURES:

- Highly efficient Class J Amplifier
- 1200 Watts of dynamic power
- 600 Watts of continuous power
- Build-in room equalization/correction
- 0 - 180° phase shift and 0 – 20 ms phase delay
- Auto Signal/Music Sensing
- Subsonic filter
- Balanced XLR, RCA and Speaker level inputs
- Patented SLAPS (Symmetrically Loaded Audio Passive System) – on the ported models only
- Comes complete with grilles, remote and remote eye
- 110V/220V selectable
