

MARINE COAXIAL SPEAKERS: M5 AND M6

MARINE COMPONENT SETS: MC5 AND MC6

REINFORCED PLASTIC BASKET

AUDIO ON THE WATER

Earthquake Marine Speakers boast treated PEI dome tweeters with powerful neodymium motors that deliver crystal clear high frequencies at all listening levels. Strong, durable, double layer cones with wider surrounds offer an excellent low frequency extension to make big waves. Furthermore, high-grade weather resistant components keep your marine audio system trouble free for years.

For added protection, Earthquake Marine Speakers are sealed in all areas. Cones are rubber coated for superior protection against the elements. Rubber seals completely isolate the frontal components from the driver from its enclosure. The motors are completely sealed with a molded UV-treated high temperature plastic exclusive to Earthquake Sound.

FEATURES

- Dual-layer poly-injected rubber-coated cones
- Treated 20-mm balanced PEI dome tweeters with neodymium magnets
- 18-dB-per-octave crossover networks with crossover frequency of 4 kHz
- Perfect fit in factory cutouts and tight spaces
