

The Sound That Will *Move* You

SWS, or Shallow Woofer System, is a patented technology by Earthquake Sound. This line of subs has a mounting depth 60% less than conventional subwoofers. However, they do not sacrifice quality for convenience. With an excursion of 2.5 inches, SWS subwoofers prove that good things do come in small packages. The installation possibilities are endless since SWS subs can fit in front doors, under seats, and even in kick panels.

An added bonus is the 8-inch SWS is designed to perfectly and exactly replace factory subwoofers in BMWs.

SWS-6.5X/10X/12X

SWS

Deep Bass from a Shallow Space

SWS-8X/8Xi

Features:

- Low profile mount for placement anywhere
- 4-Ohm impedance
- Inverted style cone design for maximum excursion in shallow mount applications
- High temperature voice with heat-sink attached
- NOMEX/ROMEX spider assembly
- Protected by 3 U.S. patents
