

RK-C6 / RK-C8

ROUGH-IN SPEAKER KITS

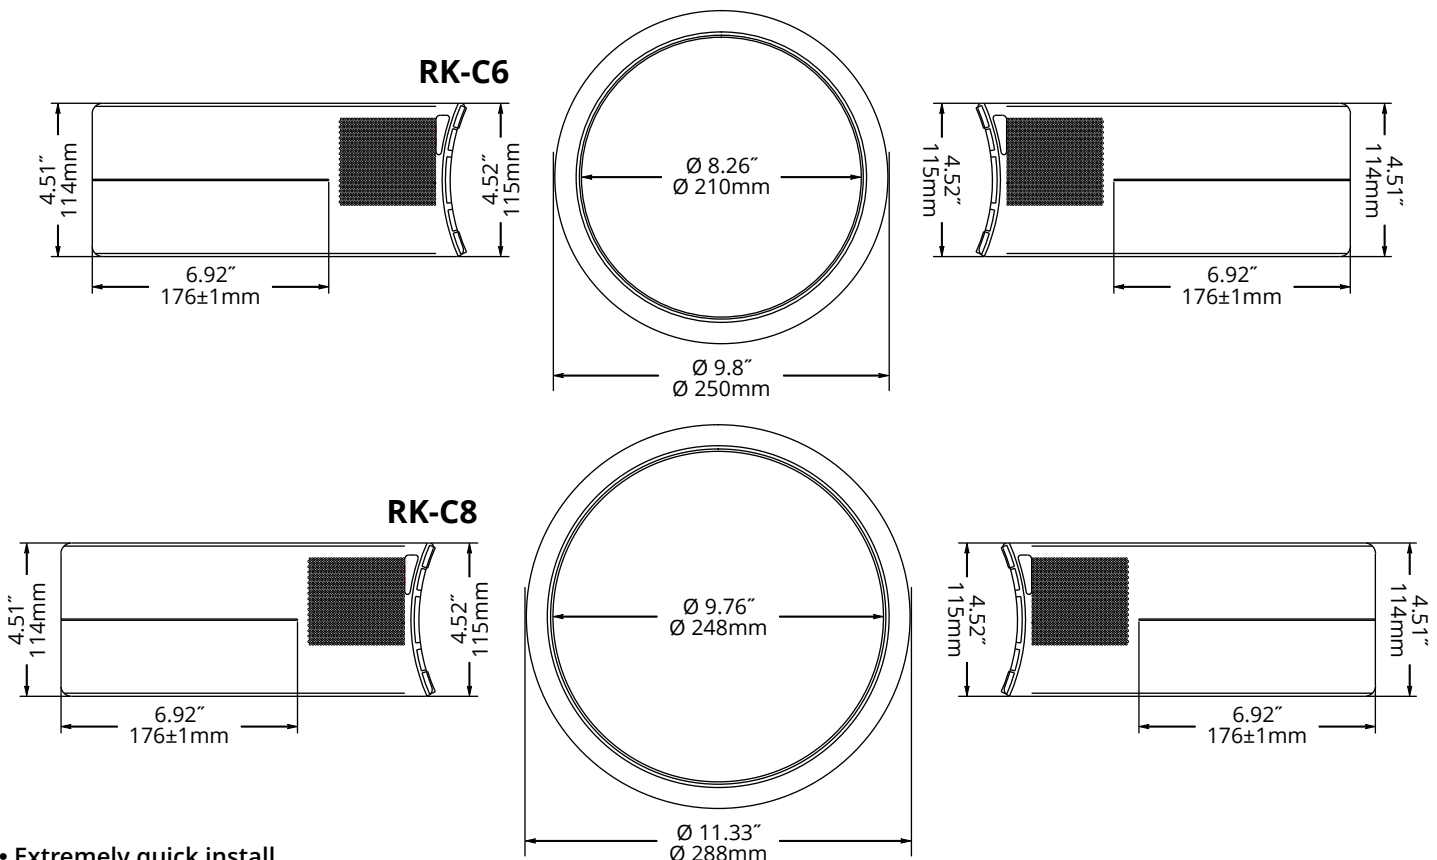

Earthquake Sound's RK-C6 and RK-C8 offer extreme versatility for the installation of Edgeless Ceiling Speakers, Reference Ceiling Speakers, and IQ Speaker series. Each rough-in kit is designed to expedite home audio installation during new construction with guaranteed customer satisfaction.

Flexible and straightforward installation is made possible with the extended aluminum snap-on dog ears and rough-in mounting rings. The wing pieces can be stapled, nailed, or screwed easily into ceiling joists or wall studs providing a reliable setup within a matter of minutes.

INSTALLATION

1. Select the speaker mounting location and route speaker wire to the mounting location.
2. Attach two metal mesh wings to the plastic speaker mounting ring.
3. Mount the assembled RK-C6/C8 in the desired location across wall studs or joists using either screws, nails, or staples so that the ring bracket and wings are positioned between the sheetrock and wall framing.
4. The RK-C6/C8 has a lip on the front of the mounting ring. Make sure the it is facing into the room prior to speaker installation.
5. After installation, run the speaker wires through the cable tie located on the mounting ring bracket. Your speaker is now ready to be installed into the RK-C6/C8 cutout hole.
6. Follow the installation instructions included with your in-ceiling / in-wall speaker packaging.

- Extremely quick install
- Easy for sheetrock installers to spot
- Anti-rust aluminum mounting wings
- Compatible with Earthquake's Turn-N-Lock™ installation mechanisms
