

The Sound That Will Move You

TremorX Super Powered Sub

Earthquake's next generation of TremorX subwoofers is ready to get louder than any other subwoofer in its category. The new TremorX's are built with TCT technology which allows the driver to play louder longer by keeping the voice coil running cool at all times. These bad boys also have stitched leads, reinforced dust cap construction for linear movement, and bigger, more effective magnets with added cooling devices to increase efficiency even more. The TremorX subwoofers have no equal and are ready to prove it.

4-Ohm Impedance:

TREMOR-X104

TREMOR-X124

TREMOR-X154

8-Ohm Impedance:

TREMOR-X108

Features:

- Heavy duty stitched leads
- Spring loaded speaker connections
- Anti-wobble cone construction
- TCT Technology (Turbine Cooled Transducer) for high efficiency output
- Military grade single 4-Ohm or single 8-Ohm voice coil options
