

SWAT-2.4X

Product Release

The Most Sophisticated Stereo/Mono Wireless Audio Transceiver on the Market

No More Wires, No Humming Ground Noise

The **SWAT-2.4X** is a wireless audio transceiver that allows you to play audio from your audio source to almost any powered speaker or amplifier wirelessly.

The **SWAT-2.4X** is the perfect solution for your home theater set-up; there is no need for messy wiring which is especially difficult in older homes (great for retrofit jobs). Now with the **SWAT-2.4X**, you don't have to worry about wiring a subwoofer that sits on the side of the room. For a more high end system, use one, two, or even three Supernova subwoofers since one Transmitter can hook up to multiple Receivers. If you don't like how the subwoofers are set up, you can easily rearrange them with the **SWAT-2.4X** (no re-wiring involved).

The **SWAT-2.4X** is also ideal for parties and entertaining. For a seamless outdoor audio system, use the **SWAT-2.4X** and avoid the headache of outdoor wiring. You can play music from your desktop inside and the sound will emit from the speakers outside. The **SWAT-2.4X** is also great for DJs who don't want people tripping on wires or want more freedom when setting up their speakers.

Humming Subwoofer Solution: The **SWAT-2.4X** eliminates the humming noise in any system. There is no ground loop - so not only does the **SWAT-2.4X** free you of wiring - it eliminates the "hard to get rid of" hum noise in conventional wiring.

Package includes:

- 1 transmitter
- 1 receiver
- 2 power supplies
- 1 mini-jack to mini-jack cord
- 2 RCA to mini-jack cords
- 1 high level input plug
